

# Etalon environments in testing.

## How we use it

TAPOST, 2015

**Jeļena Širmane**

Lead Test Engineer, Cards  
Tieto  
[jelena.sirmane@tieto.com](mailto:jelena.sirmane@tieto.com)

**Anna Timošenko**

Senior Test Engineer, Cards  
Tieto  
[anna.timosenko@tieto.com](mailto:anna.timosenko@tieto.com)

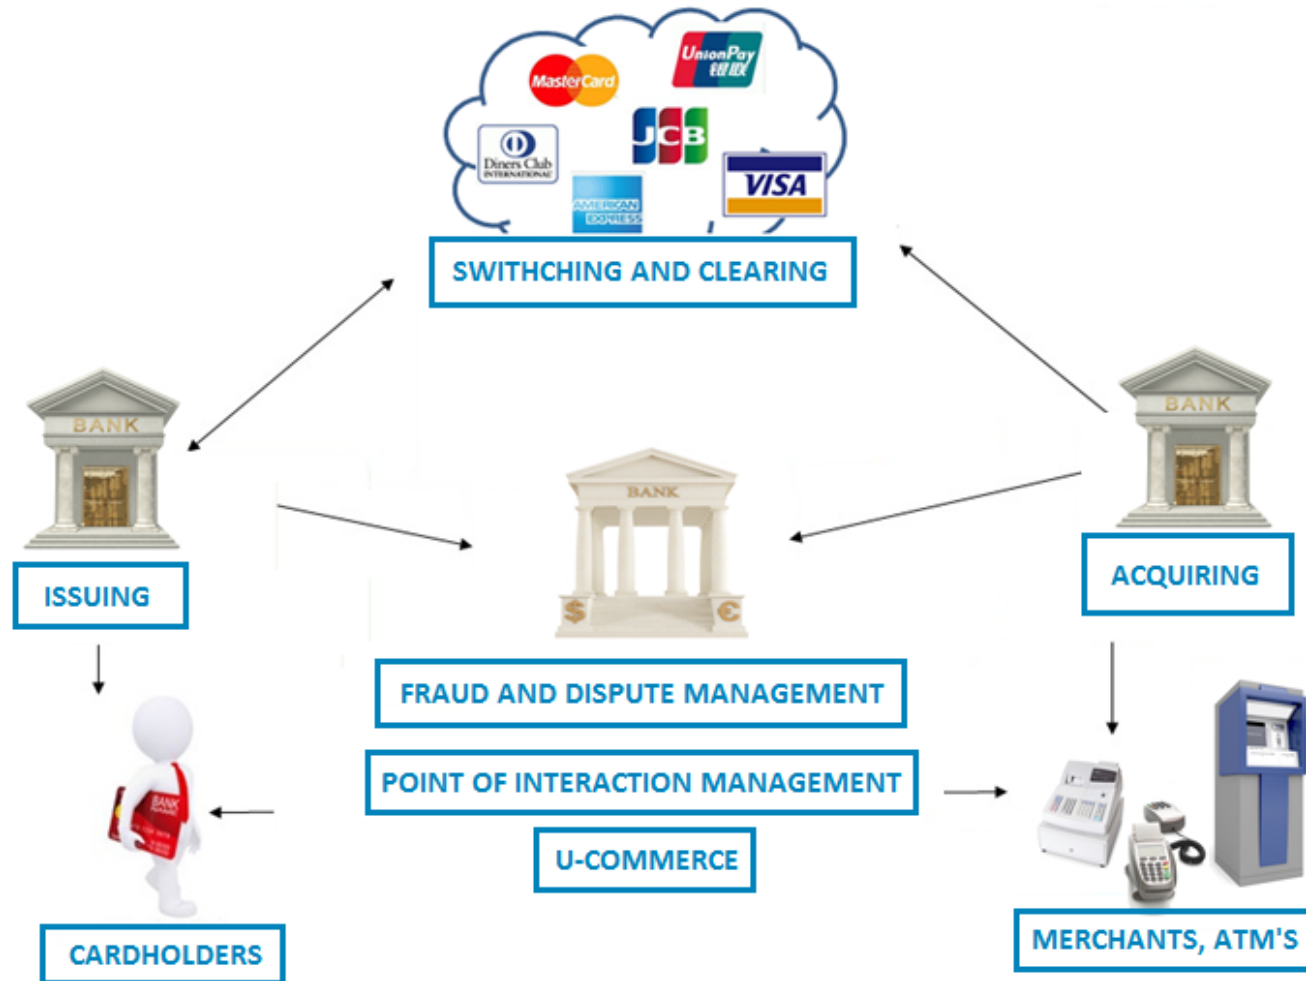

# Main challenges

- ❑ Good quality
- ❑ Wide scope
- ❑ Short time

# Card Suite system

# Huge amount of customers

Globally

80+

customers

37 countries

400+ installations

# Complicate customer solution

Simple  
system

Complicated  
system

Customer solution  
(what we test)

# Knowledge and passion

4 testing teams consisting of 60 professionals

# Reliable helpers

Automated tests of  
**most  
functionality**,  
installation,  
reporting

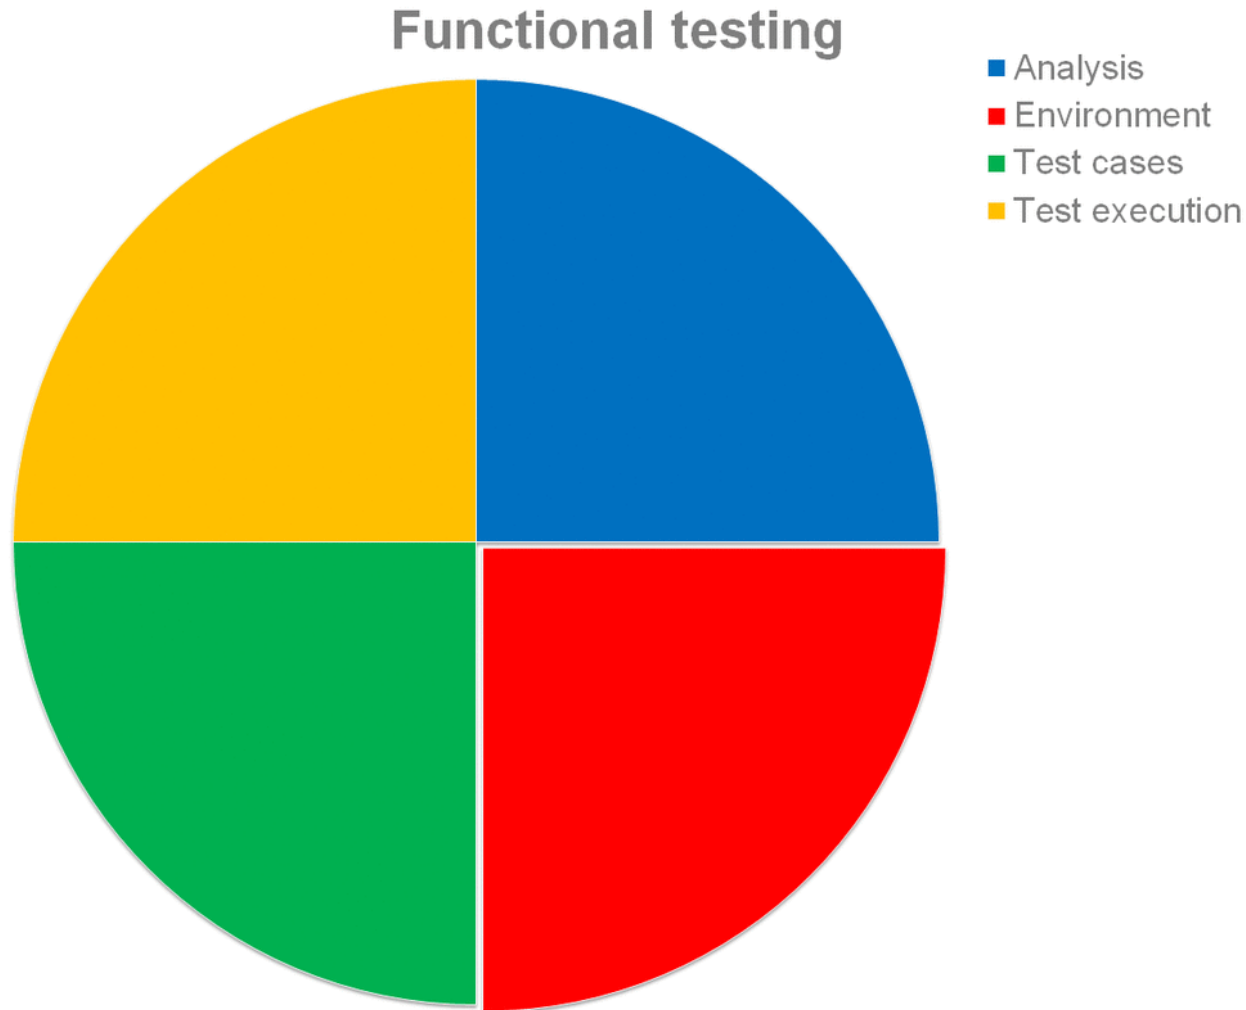

**...but it is still not enough**

# Main testing activities

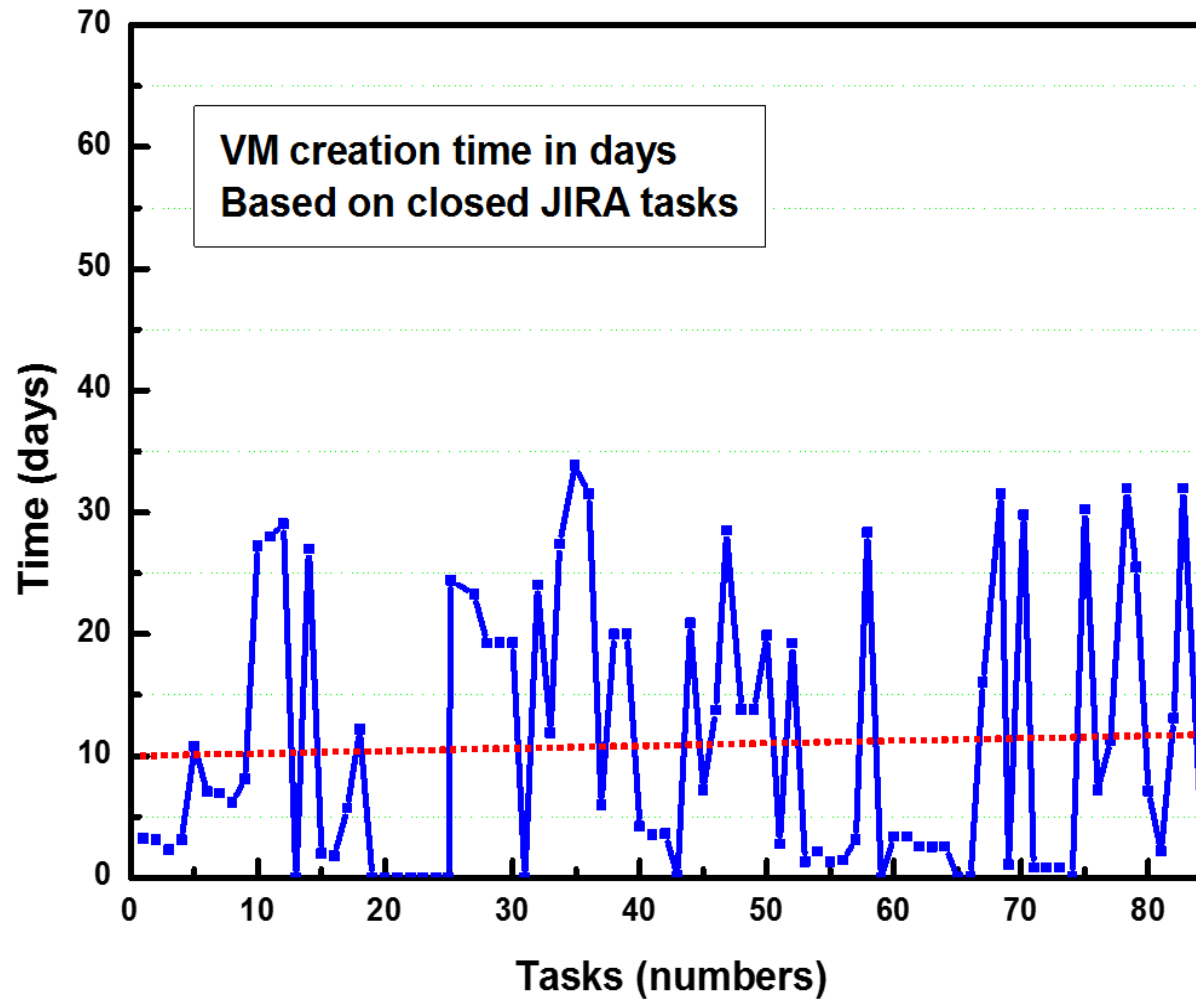

# Previously (1/3)

Clone existing environments:

- work done by technical specialist
- not up-to-date
- sometimes technically not correct environment

# Previously (2/3)

# Previously (3/3)

## Common environment:

- unexpected restart
- deleted log files
- corrupted test data

# How to solve it

Common etalon environments with self-service portal

# CSP portal

Home My Space ▾ Customers ▾ Builds ▾ ICO ▾ VMs ▾ FAQ Logout

## Welcome to Cards Self-Service Portal (CSP)!

Follow us on Intranet

Short description how to use it:

1. My Space - Your customized CSP space:
  - Customers:
    - Private Systems - You can add your private system for test compilations and project baseline for system
  - VMs:
    - Environments - List of your VMs
    - Firewalls - Manage firewalled IP addresses for your VMs
    - IPs - List of your used and free IP address (slots)
    - Machines - List of VM machines which own you
    - Machine Users - Add additional users for managing states of your VM machines
2. Customers:
  - Print Update - You can update newest Customer System modules (Print files)
  - Modules Diff - You can compare 2 System print files or module lists
  - Modules Merge - You can merge two lists of modules in one
  - Modules Search - You can search any module in all Customer System prints
3. SupBot
  - Build For Test - Possible to compile modules for testing
  - Build For Delivery - Compile modules for Delivery process
4. ICO - For ICO delivery
5. VMs:
  - TPLs (Etalons) - Possible to clone TPL virtual machines to your test VMs
6. Admin - Administration panel

# Etalons list

### VirtualBox Data

State ▼

	State	Snapshot (Current)
1	Running	

# Reference Implementations

- Full integrated Card Suite solutions:
  - Front Office
  - Back Office
- Unix and Windows machines
- Automated tests
- Demo configuration
- Proper documentation
- Support and updates

# Custom client environments

- Specific clients configuration
- Specific clients environments (DB, OS)
- Specific deployment (up to 7 machines)
- **Proper documentation**
- **Support and updates**

# How we create etalon

Test engineer

Implementation specialist  
RI team

- checks environment
- confirms it
- forwards to technical team

Technical specialist

- patches environment
- add it to CSP

Users

- operates with system

# Benefit #1

Environment ready for testing

**5 min**  
readiness

# Benefit #2

Involving testers quickly

New testers  
get involved to  
projects  
**quickly**

# Benefit #3

Own test environment

Own  
environment  
for **every**  
test specialist

# Benefit #4

Environment snapshot and backup

Snapshot  
can be done  
at **any** time

# Benefit #5

Environment export

Export to  
Virtual Machine file  
for long-term  
**storing**

# Benefit #6

Up-to-date environment

**All tests** are  
done on  
environments  
with the **same**  
**configuration**

# Challenges we face

- Etalons creation and maintenance
- Server resources

# Challenge #1- Etalon maintenance

Problem:

- Necessity to keep etalon up-to-date

Solution:

- Special team responsible for Reference Implementation
- Specialist responsible for Custom environment

# Challenge #2 - Server resources

Problem:

- Huge amount of VMs due to easy copying

Solution:

- Switching OFF VMs during weekends
- VMs deletion by users
- Assignment of IP addresses
- Linked clones

# Conclusion

---

- Test specialist allocate **much more time** for **testing** not for dealing with **environment issues**
- Etalon approach should be used:
  - more than **two testers** involved in project,
  - there are **long-term** active testing or support,
  - **complex system** is under test.
